Continuation of 5. does NOT place the application in condition for allowance because: the Applicant states that elements 613 and 623 run along the full length of the tubes and thus are not located at the distal end of the capsule. However, the Examiner maintains that if the elements run along the full-length that would include both the proximal end and the distal end, thereby teaching keying surface at the distal end. Additionally, Applicant argues that the combination of both tubes form the complete capsule; however, Applicant does not claim a complete capsule comprised of two tubes. In response to Applicant's arguments that Keritsis does not teach the placement of the capsule within an article, it should be noted that the capsule of Keritsis is fully capable of being placed within an article since Applicant does not positively recite such an article. Finally, with respect to the intended use of the keying surface as an identifier, Applicant does not distinguish the intended use with structural differences compared to the prior art.
